Product Description

Cartridge W Magnesium 3/4 Inches

This true Alkaline filter media emits Far Infrared rays that will give your water a natural taste. The 3-stage process starts with a magnetic module. Our water treatment media is made from our special blend of minerals that give it a natural mineral taste to the water. The Carbonate and Magnesium stream. Tourmaline emits Far Infrared Rays and the ceramic media disc releases negative ions (above 800/cc) which increases the water's pH. The oxidation-reduction potential. The "Super Ceramic" layer

imparts a pleasant taste to the water while emitting even more Far Infrared Rays. Almandine Garnet is a naturally occurring gem mineral with uniform physical, chemical, hardness, friability and micro-structure characteristics, which provide the essential properties for the water filtration processes. The KDF Redox layer incorporates a special blend of high purity Copper and Zinc to reduce heavy metals, microorganisms, scale, and is listed bacteriostat. The water exits through a polishing sediment filter ensuring safe, clean and crystal clear drinking water.
