## Cartridge Water Filter Magnesium 3/4 Inches

This true Alkaline filter contains five different media that emit Far Infrared Rays. The first stage process starts with a sediment filter. The second stage is a magnetic module. The third stage is a water treatment with a special blend of media. The fourth stage is a mineral taste to the water. The fifth stage is a Carbonate and Magnesium. The sixth stage is a stream. The seventh stage is a Tourmaline. The eighth stage is Far Infrared Rays. The ninth stage is a ceramic media disc. The tenth stage is ions (above 800/cc). The eleventh stage increases the water. The twelfth stage is the oxidation-reduction. The thirteenth stage is a "Super Ceramic" layer.

imparts a pleasant taste to the water while emitting even more Far Infrared Rays. Almandine Garnet is a naturally occurring gem mineral with uniform physical, chemical, hardness, friability and micro-structure characteristics, which provide the essential properties for the water filtration processes. The KDF Redox layer incorporates a special blend of high purity Copper and Zinc to reduce heavy metals, microorganisms, scale, and is listed bacteriostat. The water exits through a polishing sediment filter ensuring safe, clean and crystal clear drinking water.
