## Cartridge Water Filter Magnesium 3/4 Inches

This true Alkaline filter contains several different medias that emit Far Infrared Rays. This multi-stage process starts with a magnetic module. Our water treatment water filter media is mined from our special blend of Calcium, Magnesium, and Mineral taste to the water. Carbonate and Magnesium are added to the stream. Tourmaline and Far Infrared Rays are added to the ceramic media disc. The filter contains 800 ions (above 800/cc) which increases the water's pH and the oxidation-reduction potential.

Super Ceramic" layer contains over 10 minerals and imparts a pleasant taste to the water while emitting even more Far Infrared Rays. Almandine Garnet is a naturally occurring gem mineral with uniform physical, chemical, hardness, friability and micro-structure characteristics, which provide the essential properties for the water filtration processes. The KDF Redox layer incorporates a special blend of high purity Copper and Zinc to reduce heavy metals, microorganisms, scale, and is listed bacteriostat. The water exits through a polishing sediment filter ensuring safe, clean and crystal clear drinking water.
